

## STAKEHOLDER ENGAGEMENT PLAN

**Project Name**      ENSE 374 Project – Team Pulaski

Name	About the Stakeholder	How to Engage the Stakeholder
Timothy Maciag	This stakeholder is the project sponsor and is almost sort of the CEO of the organization.	<b>Provide Information</b>  The reason we went with this approach to this stakeholder is because we want to update the stakeholder with all of our processes because this person is also a fellow software engineer and a more experienced one at that. Although he this stakeholder doesn't have a lot of interest, we have decided to provide this person with high level of power. If we were in the industry, I don't think the sponsor might be given this level of power.
Simran Brar	This stakeholder is the project manager and an important part of the project as this person assigns work for the team members.	<b>Provide Information</b>  The Project manager is sort of like the leader of the project so this person has to be informed of all information so they can move the project in the right direction and assign proper tasks to the team members.
Raman Preet Singh	This stakeholder is one of the project team members and is in charge of completing the tasks assigned by the Project Manager and also provides information to the project manager.	<b>Monitor</b>  This stakeholder needs to be monitored to check whether this person is accomplishing all his tasks on time. Since this type of stakeholder doesn't hold a high level of power, this stakeholder needs to be monitored so that they provide all ideas and information to the manager.
Basheer Ahamed Rafiqudeen	This stakeholder is also a project team member and has similar responsibilities as the other team member. This person finishes	<b>Pay close attention:</b>  The reason this stakeholder has to be paid close attention is because this

tasks assigned by the manager and has to complete it on time.	person already missed to submit a document on time and missed an important meeting with the sponsor and has to make up for it with another meeting.
